

People at risk for hepatitis C include those who:

- Currently inject drugs
- Injected drugs in the past, even if it was once or many years ago
- Received donated blood or organs before 1992
- Have abnormal liver tests or liver disease
- Have been exposed to blood on the job through a needlestick or injury with a sharp object
- Have been on long-term hemodialysis

**Over 200,000 New Yorkers
have **Hepatitis C**.**

Are you one of them?
