STATEWIDE PLANNING AND RESEARCH COOPERATIVE SYSTEM

ANNUAL
REPORT SERIES
1980

NEW YORK STATE DEPARTMENT OF HEALTH
DAVID AXELROD, M.D., Commissioner

COMMISSIONER'S MESSAGE

Over the past few years, we in New York State have made satisfying progress in our campaign to contain the growth of health care costs, and at the same time have realized significant health gains by improving public access to medical institutions and services. These difficult goals could not have been attained had we not sharpened our understanding of the very nature of the state's health care industry through the collection and analysis of accurate data concerning hospital services and patterns of usage.

Such data simply did not exist on any organized or collective basis until the establishment of SPARCS, the Statewide Planning and Research Cooperative System, which, in the few years of its existence, has become a national model for the comprehensive monitoring of health resources and services.

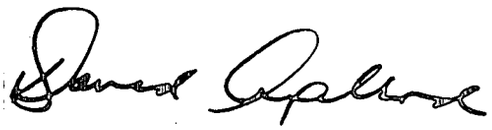
The history of SPARCS traces back to 1975, when a group of representatives from hospitals, insurance companies, physican groups, local planning agencies and the New York State Department of Health began to meet and define the requirements for a statewide system to collect and make timely measurements of hospital length-of-stay data. In 1977, the New York State Department of Health obtained a grant from the federal Health Care Financing Administration to continue and expand the work of the original group. Over the course of its development, SPARCS has achieved a spirit of warm cooperation between representatives of the health care industry and government.

To address the concerns of those worried about potential breaches in confidentiality in the handling of SPARCS data, the State Hospital Review and Planning Council adopted stringent regulations concerning the use and release of such data. These regulations established a Data Protection Review Board to review all requests for information and to rule on matters affecting individual privacy. The board consists of 15 members representing a variety of interests, including health consumers and providers, the academic medical community and the medical and legal professions.

SPARCS has emerged as a management tool to assist both the public and private health sectors in decision making with respect to the financing, planning and development of health services in New York State. The facts and figures gathered by SPARCS from hospitals throughout the state have strengthened our ability to address effectively the crucial issues of health resource allocation, cost containment and the development of alternatives to institutional care.

I am pleased to present this first annual report of SPARCS data. The reports and tables contained herein are based on data for the 1980 calendar year. We intend to publish such reports on an annual basis and will, as resources permit, publish additional in-depth reports derived from SPARCS data.

I believe that the present and potential applications of information retrieved through SPARCS will serve as a key component in our efforts to build a more responsive and effective health care system for the people of New York State.



David Axelrod, M.D.
Commissioner
New York State Department of Health

1980 ANNUAL REPORT SERIES STATISTICAL TABLES 32

THE SPARCS DATA SYSTEM

HISTORICAL BACKGROUND

OVERVIEW

The 1970s brought about a dramatic shift in responsibility for health care expenditures in the United States. The federally sponsored and managed Medicare program and the joint federal and state administered Medicaid program emerged as the largest reimbursers of health care expenditures. As the costs of these systems continued to escalate, the development of hospital cost-saving and monitoring mechanisms became a primary goal of the U.S. Department of Health and Human Services (HHS) and the New York State Department of Health. One long-standing obstacle to achieving this goal was inadequate information about hospitals. In many cases, hospital information was fragmented or even unavailable. As a major step toward improving the reliability and uniformity of hospital data, the New York State Department of Health in 1977 established the Statewide Planning and Research Cooperative System (SPARCS) with the cooperation and financial support of the U.S. Department of Health and Human Services.

There has always been a need for a uniform consolidated information system. Early efforts to develop such a system in New York included the 1975 creation of a federally funded, broad-based voluntary group known as the Data Consortium. Composed of statewide representatives from hospitals, insurance companies, physician groups, local planning agencies and government, this group laid the groundwork for the SPARCS system. It acknowledged the pressing need for an integrated data system for hospital care delivery information in New York State.

With the formation of the U.S. Health Care Financing Administration (HCFA) within HHS and its assumption of the responsibility for both the Medicare and Medicaid programs, the need for integrated data systems was even more pressing. In 1977, HCFA funded a number of integrated data demonstration projects including a $1.1 million grant to the New York State Department of Health's Office of Health Systems Management (OHSM). An integral part of this grant -- the Data Systems Development Project (DSDP) -- was SPARCS, which was to serve as a national model for a uniform hospital reporting network, a comprehensive health care data base and an integrated management information system.

With the funding from HCFA, the DSDP became the center of integrated data collection efforts in New York. The goals and values of the Data Consortium were continued by the DSDP through its broadly representative advisory groups.

SPARCS, as finally designed and implemented, receives, stores and processes inpatient data from all general hospitals in New York State. It is a unified, comprehensive health care information network that supports and links, through integrated data, the statutory functions of resource planning, financing and surveillance of hospital services in New York State.

Reporting information to SPARCS replaces myriad forms and data formerly submitted by hospitals. SPARCS is structured to make use of existing data collection systems including existing discharge data abstracts and uniform hospital bills.

Because of the success of SPARCS, New York is the first state in the nation to have all major third-party payors using a uniform hospital bill. It is also the first state to have a common statewide discharge data set for the Professional Standards Review Organizations (PSROs) that are responsible for statewide utilization review functions.

DISCHARGE DATA ABSTRACT

SPARCS uses existing resources and processes to the greatest extent possible. Because the majority of hospitals collected discharge data in some form for their own use or for the PSROs, the Department of Health decided to define a data set rather than develop a form. The discharge data set is based on the Uniform Hospital Discharge Data Set, developed by the National Committee on Vital and Health Statistics.

Hospitals submit computer tapes rather than paper forms to SPARCS. Because approximately 85 percent of the hospitals in New York State had either automated their discharge abstract process or purchased this service from a data collector, this was the most efficient mechanism for collecting the information. Hospitals' data used by the PSROs are also used by SPARCS, thereby eliminating the need for hospitals to submit duplicate data directly to the PSROs.

UNIFORM HOSPITAL BILL

The development of a uniform hospital billing form and data set was a more difficult process. At the outset, HCFA strongly recommended that New York adopt the Uniform Bill (UB-16), the form that was being demonstrated in a number of states. However, an analysis of the UB-16 indicated that it could not be implemented in New York without great difficulty. With the backing of the major payors and the hospital industry, New York pursued its alternative billing form, the Uniform Billing Form (UBF-1) -- a document meeting all the uniform bill data needs of New York. Based on New York's recommendation, HCFA agreed to accept the UBF-1 as an alternative to the UB-16 in New York.

The UBF-1, the billing form that hospitals use for all inpatient claims in New York, also serves as a reporting document for SPARCS. The uniform bill provides hospitals with a single billing document, eliminating the dozens of claim forms previously required by individual payors. SPARCS information is generally extracted from the UBF-1 after payment is made to the hospital. This procedure takes advantage of the edits, corrections and computer tape transfers performed by the various third-party payors, helping to ensure accuracy of information and reducing the amount of processing required by SPARCS. Also, post-payment data collection does not interfere with cash flow to hospitals from individual payors, an important consideration in industry acceptance.

OVERVIEW OF SPARCS REGULATIONS

A major reason for bringing SPARCS under the control of the Department of Health rather than a private organization was the realization that regulatory functions are best administered by a state agency. Experience has shown that many institutions and organizations would not cooperate with a voluntary system because of the lack of official regulations for preserving confidentiality. As a result, state regulations tightly control confidentiality of SPARCS data.

During 1978, staff of the Data Systems Development Project and two associated advisory bodies -- the Uniform Billing Advisory Committee and the Discharge Data Abstract Advisory Committee -- began formulating the technical regulations that would enable SPARCS to collect hospital stay data. These two committees eventually combined to form the SPARCS Technical Advisory Committee (STAC). (A listing of organizations represented is included in Appendix A.)

In late 1978, regulations were promulgated to standardize the SPARCS reporting documents and data sets and require that New York State hospitals utilize these documents and data sets and submit their information in a timely fashion.

Gaining agreement on the philosophy and content of the SPARCS privacy regulations was more difficult. These confidentiality regulations affected every party involved with hospital care in New York State. Therefore, careful attention to detail and the ability to effect workable compromises was required by the drafters of these regulations. It was important for the department to maintain the privacy and confidentiality of the individual patient stay records and at the same time make SPARCS data accessible.

A decision was made to omit patient name from the SPARCS data set for both the Discharge Data Abstract (DDA) and the Uniform Bill. The impact of deleting this element was significant. By design, the SPARCS system could not track patients across time, i.e., the system became incident based. Epidemiologists, researchers and government representatives are not able to use SPARCS to ascertain the number of individuals *per se* treated for specific diseases, but rather only the number of patient incidents that have occurred. This reduction in the originally planned scope of the system was a direct result of efforts to protect patient privacy.

In February 1979, the Council on Hospital Information Policy (CHIP), an advisory group to the DSDP, and its Legal Issues Committee prepared privacy regulations. After several months of discussion and further revision, the regulations were adopted in August 1979. The regulations comprise the first set of specific confidentiality procedures governing a hospital data system in the nation.

The privacy regulations define the major purposes for which data from SPARCS may be used:

- *Financial Studies* - Investigation of alternate means of paying for hospital care to bring

about a more cost-effective system of hospital financing.

- *Rate Setting* - Modeling of rate setting policies and calculation of reimbursement rates for hospitals.
- *Surveillance* - Surveillance of hospitals including medical audits and utilization reviews.
- *Health Planning and Resource Allocation Studies* - Rational allocation of limited resources to health care, provision of adequate health care and the Article 28 approval process.
- *Epidemiology* - Identification of exceptional morbidity and mortality patterns for more in-depth study; studies of prevalence and incidence of diseases.
- *Research Studies* - Investigation of health care research studies including utilization, variations on length of stay, disease dynamics and health economics for patient use patterns.
- *Hospital Monitoring of its Own Data* - Determination by hospitals if the data submitted on DDAs and UBFs are accurate and complete.

In addition, the regulations define classes of data including:

- *Deniable Data Elements* - Elements that individually, or in conjunction with other elements, could theoretically lead to the disclosure of a patient's identity. They include:
  - Medical Record Number
  - Admission Number
  - Admission Date
  - Discharge Date
  - Date(s) of Surgery
  - Third-Party Payor Patient Identification Number
  - Address
  - Birthdate
  - Physician Identification
  - Accident Date
  - Hospital Identification
- *Hospital Stay Data* - Data on individual patient stays that include only the deniable data element of hospital identification. Such data, including hospital identification, are considered nondeniable to the Department of Health, HCFA and the National Center for Health Statistics.

Finally, the regulations established a Data Protection Review Board (DPRB) that is responsible for approving all requests for deniable data. This 15-member, public review body is broadly representative of the community, industry and government and is appointed by the Commissioner of Health. (A listing of current members is included in Appendix B.)

FIGURE A

REPRESENTATION ON THE 15 MEMBER DATA PROTECTION REVIEW BOARD

1. CONSUMERS (3 SEATS)
2. BAR ASSOCIATIONS (1 SEAT)
3. HOSPITAL PROVIDERS (2 SEATS)
4. MEDICAL RECORD ASSOCIATIONS (1 SEAT)
5. MEDICAL SOCIETIES (1 SEAT)
6. COMMERCIAL INSURERS (1 SEAT)

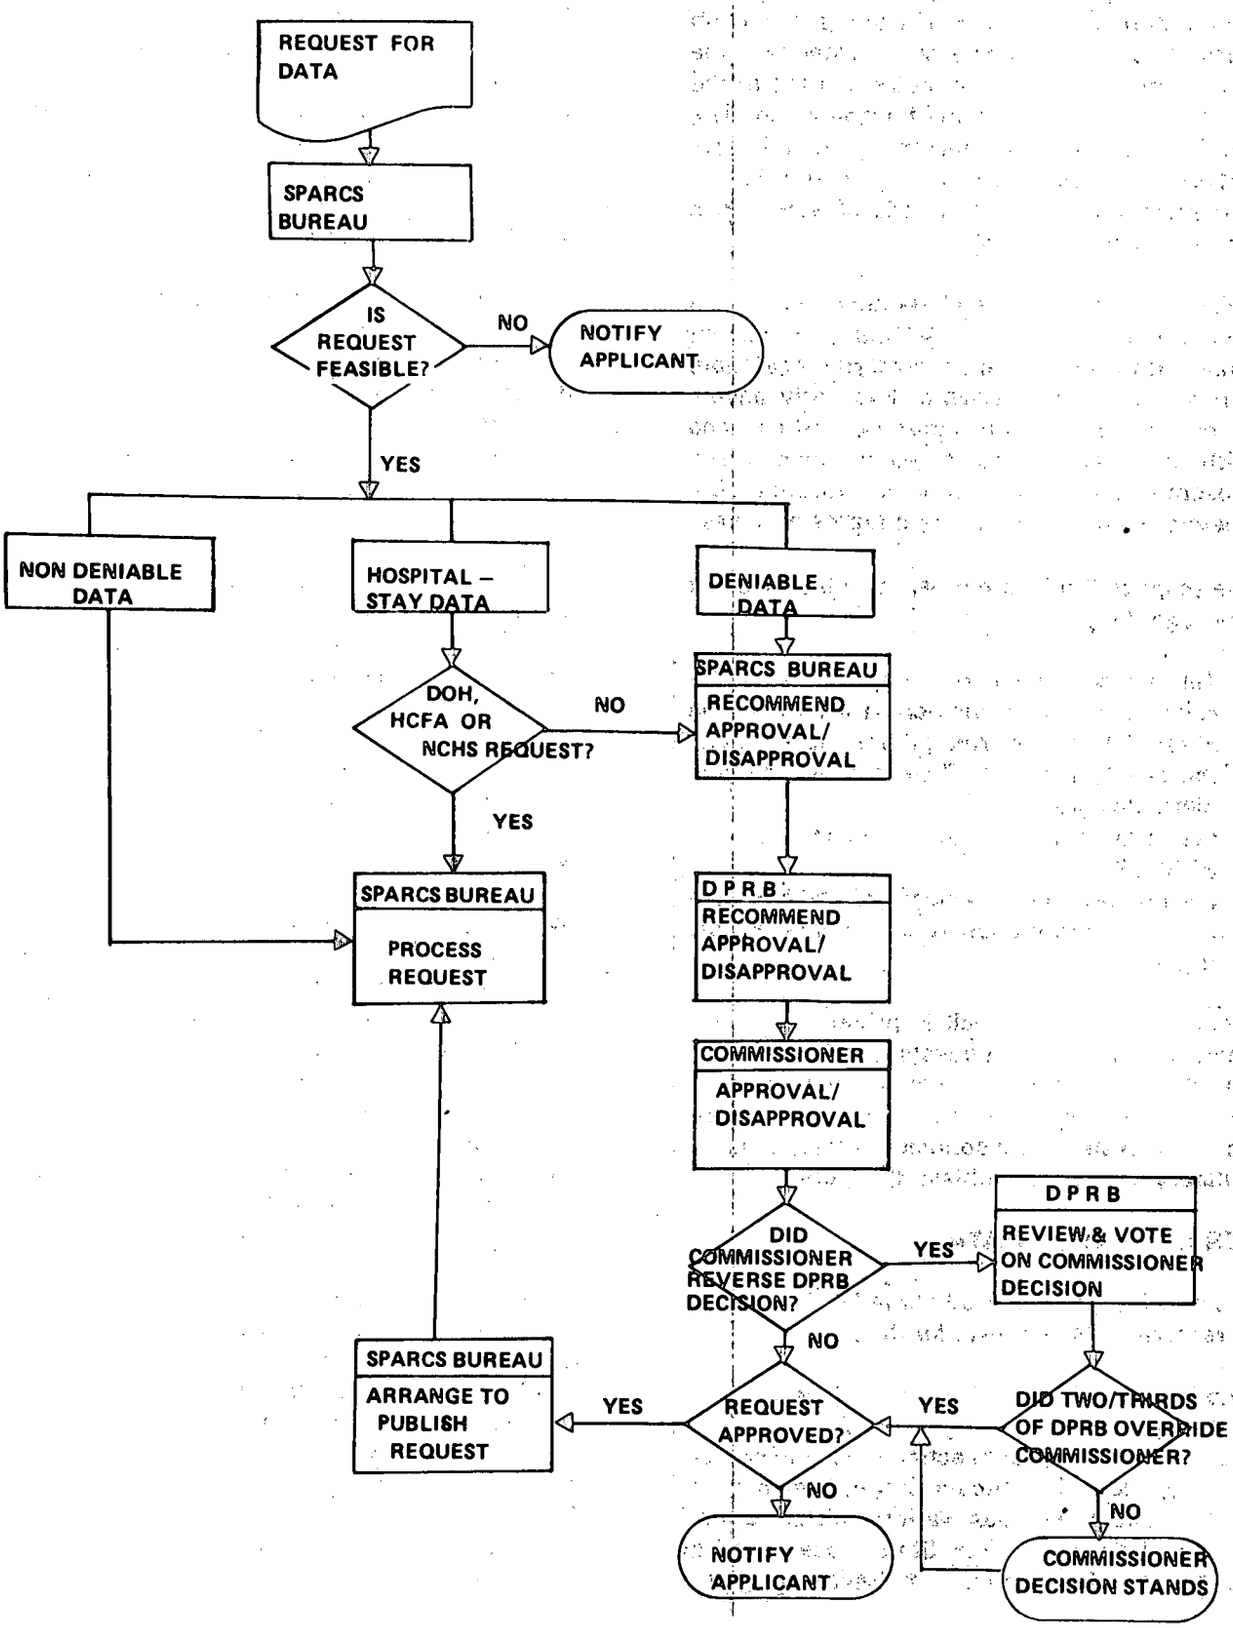
8. HEALTH SYSTEMS AGENCIES (1 SEAT)
9. PROFESSIONAL STANDARDS REVIEW ORGANIZATIONS (1 SEAT)
10. HEALTH CARE ACADEMIC RESEARCHERS (1 SEAT)
11. STATE GOVERNMENT (1 SEAT)
12. FEDERAL GOVERNMENT (1 SEAT)

The board makes recommendations to the Commissioner of Health on the release of information. While the commissioner may reverse the decision of the board, the board retains the authority to overturn the commissioner's decision by a two-thirds vote of the entire board. This system of checks and balances protects the rights of individuals while providing access to needed information.

Since 1980, 47 requests have been reviewed by the board. For the release of deniable data to be approved, the request must be technically feasible and a majority of the DPRB must be satisfied that the purpose for the request is legitimate, the applicant is qualified, the applicant needs the data to conduct the proposed study and adequate safeguards exist to protect patient privacy.

FIGURE B

SPARCS DATA REQUEST REVIEW PROCESS



COUNCIL ON HOSPITAL INFORMATION POLICY

A final regulatory change was the official implementation of the CHIP. The primary function of CHIP is to provide advice and assistance to the Department of Health on matters relating to the collection and dissemination of hospital data. The council continues to perform the advisory functions of the DSDP's council, and advises the commissioner on the data needs of New York's hospital industry.

CHIP consists of 14 members appointed by the Commissioner of Health. (A listing of current members is included in Appendix C.) By regulation, the hospital industry, private third-party payors and commercial health insurers, PSROs and health systems agencies each have three representatives on the council; hospital care academic researchers have two representatives.

The scope of CHIP's authority includes review of policy regarding:

- the establishment of new hospital data collection systems, including the formulation of regulations governing these systems, and the development of efficient data collection methodologies;
- the maintenance and/or modification of SPARCS;
- the preparation of reports that address the common information requirements of data users.

Once a year the council is presented with a summary of completed requests for SPARCS data. Using this and other available information, CHIP may make recommendations to modify the request processing system. The council may also propose regulatory changes to achieve this goal.

USES OF SPARCS DATA

From its inception through June 1982, SPARCS has received 194 requests for data.

The largest segment of SPARCS users is made up of hospitals requesting their own data and management consultants acting on behalf of their client hospitals. The second largest segment of SPARCS users includes various divisions and bureaus of the New York State Department of Health. The Department of Health requests information to fulfill the following statutory functions:

- obtaining up-to-date information on hospital average lengths of stay by patient types to determine reimbursement and length of stay standards;
- monitoring utilization review determinations to ensure that appropriate care is delivered;
- identifying unusual patterns of morbidity and mortality for public health purposes;
- determining how various treatment patterns affect hospital costs;
- analyzing comparative hospital utilization and productivity profiles for regional planning decisions;
- consolidating information requirements within SPARCS to eliminate overlapping data collection activities carried out by other organizations.

Examples of requests for data in each DPRB-approved category are:

- *financial* - requests from agencies in state and federal government and committees from the New York State Legislature;
- *rate setting* - requests, to date, have been nondeniable, therefore, not requiring DPRB approval;
- *surveillance* - requests from PSROs and state agencies;
- *health planning and resource allocation* - requests from New York State Health Systems Agencies (HSA), the New York State Health Planning Commission, consulting firms and hospitals;
- *epidemiology* - requests from bureaus in the New York State Department of Health and other state agencies;
- *research studies* - requests from independent researchers and state agencies including the Department of Health.

All requests for SPARCS information are sent to the SPARCS Bureau. SPARCS staff members send requestors a form and informational material on SPARCS data. When requests are approved for production, SPARCS provides a cost estimate based on availability of existing reports and the cost of analysis, programming and computer time. The requestor must agree to pay the actual costs for report production (not to exceed the estimate) prior to the processing of the request.

Requests for nondeniable data are processed and disclosed consistent with the New York State Freedom of Information Law. A summary of the releases of SPARCS information and requests considered by the DPRB is published monthly in the *State Register.*

The 1980 SPARCS data base of discharge data abstracts is the source of a statistical report that was released to each hospital in January 1982. This report contains the number of discharges and average length of stay (with standard deviation) by Diagnosis Related Groups (DRGs) and Major Diagnosis Categories (MDCs). It also contains columns listing aggregated statistics for each hospital's county, HSA and for the entire state.

DRGs and MDCs were chosen for this initial report because they are widely known and can be used for analysis of each hospital's case mix. DRGs are a patient classification system which were developed by the Health Systems Management Group of the School of Organization and Management at Yale University. The classification system begins with the analysis of each individual abstract and its assignment to one of 83 mutually exclusive and exhaustive primary diagnostic areas or MDCs. Within each MDC, an abstract is assigned to a single DRG based on certain predetermined criteria. The criteria used to assign an abstract to a DRG within a MDC include principal diagnosis, secondary diagnosis, principal procedure, secondary procedures and age. The exact criteria used depend on the MDC. The branch diagram in Figure C gives an example of how abstracts assigned to a primary diagnosis area (MDC 66-Arthritis) are further assigned to one of the five DRGs within the MDC.

The *1980 Annual Report Series* is the second report released to all hospitals. It presents 1980 hospital stays through a set of standard reports of value to a wide spectrum of health information users. Development of the formats for these reports began in 1980 and is being coordinated through the Health Information Users Advisory Committee (HIUAC), whose members represent major health data users in the state. (A listing of current members is included in Appendix D.)

SUMMARY

The most essential ingredient to the success of SPARCS in New York is cooperation between the public and private sectors to meet the information needs of the present and to plan for the future. Throughout the design and development of SPARCS, government has invited active participation from the community and hospital industry. As a result, SPARCS has received widespread support among various organizations that have contributed to the development and continuation of the program.

FIGURE D

DATA COLLECTION PROCESS

DISCHARGE ABSTRACT COLLECTION NETWORK

In 1980, 299 hospitals and hospital divisions submitted discharge data abstract records to SPARCS. Hospitals use three different methods for submitting records in a uniform, computer-readable format on magnetic tape:

1) Two hundred and fifty-three facilities subscribed to private information processing services that collect discharge abstract data for each hospital discharge. More data are collected than required by SPARCS. The abstracting services edit the information and extract the elements required for incorporation into SPARCS. (See listing in Appendix E.) The abstracting services not only send computer tapes of discharge records to SPARCS but also produce management reports as a service to their subscriber hospitals. The management reports use data fields in addition to SPARCS data that are submitted to the information processing services by their subscriber hospitals.

   When SPARCS receives DDAs, they are validated to identify critical and noncritical SPARCS errors. A critical data element is one that must have a valid value before a record is accepted by the system. The data collector is notified when a discharge abstract needs correction. Discharge abstracts are carefully screened for duplicate submissions.

2) Twenty-nine hospitals in New York were self-automated in 1980. These facilities transmitted computer tapes of discharges directly to SPARCS.

3) The remaining 17 facilities submitted discharge data abstracts to the Utilization Information Service (UIS) for conversion to computer tape for SPARCS. Only those elements required by SPARCS are collected. These hospitals are called "manual" UIS subscribers, (as opposed to those facilities that privately subscribe to UIS), and do not receive management reports from UIS on the basis of their SPARCS submissions. Rather, UIS merely reduces the SPARCS data to computer readable format for the SPARCS program.

Out of 299 hospitals, 9.7 percent were self automated, yet accounted for 17.5 percent of all discharges reported in 1980. Manual reporting hospitals represent 5.7 percent of all hospitals, but account for only 2.9 percent of reported discharges. Self-automated hospitals, therefore, tend to be larger than average in terms of patient discharges and possess the technical resources to supply their data directly to SPARCS. Manual reporting facilities, on the other hand, tend to represent a smaller than average proportion of patient discharges and are not likely to have the technical resources to process their own data.

Each method of discharge data submission is producing timely and accurate information for incorporation into the SPARCS data base. Figure E is a flow chart of the discharge abstract collection system.

☆ Data Elements Collected by SPARCS.

UNIFORM BILL COLLECTION NETWORK

When a UBF-1 is completed for an inpatient discharge, the hospital staff distributes copies of the form to the appropriate third-party payor or payors. Uniform bill data collection for SPARCS is accomplished by a network of data collectors that put the bill information on magnetic tape. (The data elements collected for SPARCS are listed in Appendix F.)

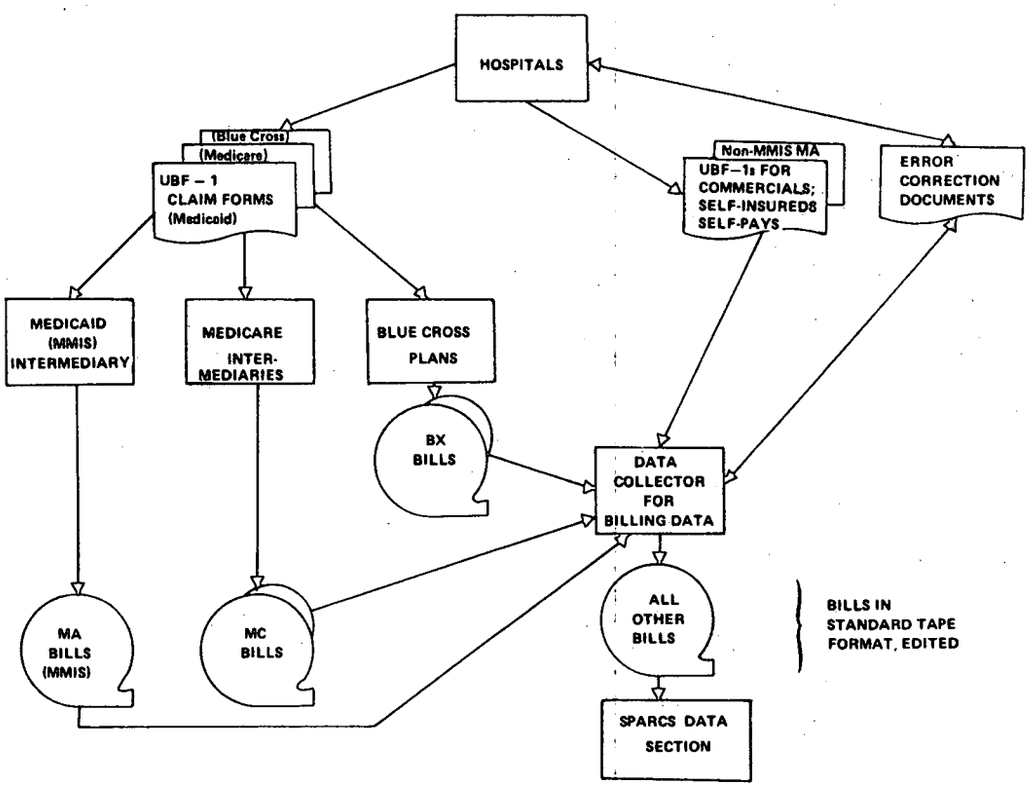
SPARCS data are gathered after Medicare (26%), Medicaid (24%) and Blue Cross (30%) claims are processed, thereby enabling SPARCS to take advantage of the existing edits used by these payors. For all other types of claims, hospitals are required to submit a copy of the UBF-1 before the claim is processed, directly to their regional SPARCS Data Collection Center.

The SPARCS Data Collection Centers are run by Blue Cross of Greater New York under contract to the Department of Health. All UBF records are validated at the Central Data Collection Center in New York City by a system of computer edits. Rejected records are sent to regional data collection centers that determine if errors were the result of data entry or hospital input errors. After the errors are corrected, the records are reentered into the system. Tapes of accepted records are sent from the Central Data Collection Center to SPARCS in Albany. The tapes are processed by the department through another validation program and, if no errors are detected, the records become part of the SPARCS data base.

The DDA and the UBF-1 have common elements that enable matching of records concerning patient stays. By linking these records, a merged file containing both financial and summary medical abstract information for all inpatient hospitalizations is created. The file may then be compared to or matched with data from the Institutional Cost Reports (ICR).

FIGURE G

BILL DATA COLLECTION



CURRENT CONSTRAINTS ON DATA APPLICATIONS

The statistics in this report are derived from discharge data abstract submissions for 1980, the first full year of SPARCS data collection. SPARCS was implemented in three phases during 1979. New York City hospitals began data submissions in July 1979. The hospitals surrounding New York City (excluding Nassau County) began submitting data in September; Nassau County hospitals began submitting data in October to coincide with the implementation of the Medicaid Management Information System (MMIS). All other hospitals in the state implemented SPARCS reporting in November.

SPARCS records reflect information only for those patients whose hospital admission occurred on or after the date of the system's implementation. For example, the record of a patient who was discharged from a hospital in 1980, but whose date of admission was prior to July 1, 1979, would not have been reported to SPARCS. While the statewide number of patients in this category is small, the number of patient days they represent can be significant for some hospitals. Thus, the patient-day and length-of-stay statistics in the Annual Report Series are lower than they would be if the records for all patients discharged in 1980 were included.

While the lower than expected patient-day component of the Annual Report Series is limited to 1980, the effect is not uniform among the state's hospitals. Some facilities specialize in serving patient populations requiring the type of extended care most often associated with psychiatric facilities. The 1980 SPARCS patient-day statistics for this category of hospital are much lower than they would be had SPARCS collected data on all patients discharged in 1980, regardless of the date of admission.

There is a corollary issue regarding the SPARCS methodology for calculating patient days. SPARCS arrives at a patient-day count for each discharge record by subtracting the date of admission from the date of discharge. In this report, all patient days of persons discharged in 1980 are counted if their dates of admission were subsequent to the system's implementation in 1979. Data for patients entering a hospital in 1980, but discharged in 1981, are not included in the statistics presented here. If patients are admitted and discharged the same day, their length of stay is one day.

The Institutional Cost Report, submitted annually to the Department of Health by each hospital, uses a different reporting method for patient-day figures. In the ICR, patient days are reported in the year of occurrence, not the year of discharge. A patient admitted in 1979 and discharged in 1980 will have his patient-day information allocated to both the 1979 and 1980 ICRs.

Over time, the SPARCS and ICR patient day totals should approximately agree, and statewide statistics will be very close from year-to-year. This assumes a random distribution of patients who are admitted in one calendar year and discharged in the next. However, in any given year, individual hospitals may expect their SPARCS and ICR data to differ somewhat. Differences of this nature are attributable to the different purposes served by SPARCS and ICR data, and not to theoretical inconsistencies between the two systems. The plan is to develop programs that will enable SPARCS to calculate patient-day occurrences for any given period of time by selecting discharge records for more than one year and eliminating those patient days not in the target period. When these programs are in place it will be possible to manipulate SPARCS data for an almost direct comparison to the ICR.

FIGURE H

SPARCS/ICR PATIENT DAY METHODOLOGY

	YEAR 1	YEAR 2	YEAR 3	PATIENT DAYS INCLUDED IN SPARCS ARS	PATIENT DAYS INCLUDED IN ICR
DISCHARGE X		A---D		YEAR 2 ONLY	YEAR 2 ONLY
DISCHARGE Y	A.....D			ALL DAYS REFLECTED IN ARS FOR YEAR 2. (YEAR 1 DAYS CAN BE DERIVED.)	DAYS ARE REPORTED, AS OCCURRING, IN YEAR 1 AND YEAR 2.
DISCHARGE Z	A.....D			ALL DAYS REFLECTED IN ARS FOR YEAR 3. (YEAR 1 and 2 DAYS CAN BE DERIVED.)	DAYS ARE REPORTED, AS OCCURRING, IN YEAR 1, YEAR 2 AND YEAR 3.

NOTE: A = Date of Admission
D = Date of Discharge

In contrast to the Discharge Data Abstract which is submitted to SPARCS shortly after a patient's hospital discharge, the bulk of the uniform bill data is obtained only after payment has been made to the provider. Although this "post payment" submission of billing data has many benefits, some problems do occur when there is a long period between the hospitals' submission of bills and receipt of data by SPARCS. This occurs when there is a question on a patient's eligibility or when benefits have to be coordinated among different payors.

Bill processing for newborns also presented a significant obstacle for SPARCS. Unless special nursery care was required, payors generally reimbursed hospital nursery expenses on the basis of the mother's claim form. During 1980, a number of newborn claims were not received by SPARCS resulting in a loss of UBF-1 data for newborns. This problem was corrected on January 1, 1982, when SPARCS required a separate UBF-1 to be submitted for newborns.

In contrast to the DDA, which has been routinely collected by medical records personnel in most hospitals and used to generate management reports, uniform bill data collection represented an entirely new process for hospital billing office personnel. The main objective for hospital billing office staff revolves around generating cash flow for the hospital; and as a result the submission of SPARCS data was seen as an additional administrative burden.

Numerous errors occurred during and after implementation of the system. Once third-party payment has been received, there is little incentive for hospitals to promptly correct these data for SPARCS. An extensive system for tracking bills with errors is necessary and significant resources must be devoted to the correction process. It is hoped that as the usefulness of these data for reimbursement and planning increases, hospitals will have a greater incentive for prompt correction of errors.

Another major difference between the DDA and UBF-1 process is that regardless of the length of a patient's hospital stay, the DDA is completed only once by the hospital. Hospital billing, however, follows a different pattern. Many hospitals process bills monthly. Thus, the submission of a UBF-1 does not always entail a discharge; extended-care patients often require several bills prior to discharge. When these cases involve more than one payor, SPARCS must consolidate records for multiple payors. This is a complex process, fully successful only after all of a patient's component bills are received and properly validated.

The 1980 data from the uniform bill do not yet meet the standard necessary for inclusion in this *Annual Report Series*. However, UBF-1 data have been used by individual hospitals and for specific research projects. As more resources become available, work on uniform bill data files will begin to bring reliability to the level of the DDA information reflected in this report.

DESCRIPTION AND PRESENTATION OF SELECTED 1980 STATISTICS

AGE OF PATIENT

The age categories used in the *Annual Report Series* are newborn[1], 0-5 (excluding newborns), 6-14, 15-19, 20-44, 45-64, 65-74 and 75 years and older. For purposes of display, the newborn, 0-5 and 6-14 age categories have been combined.

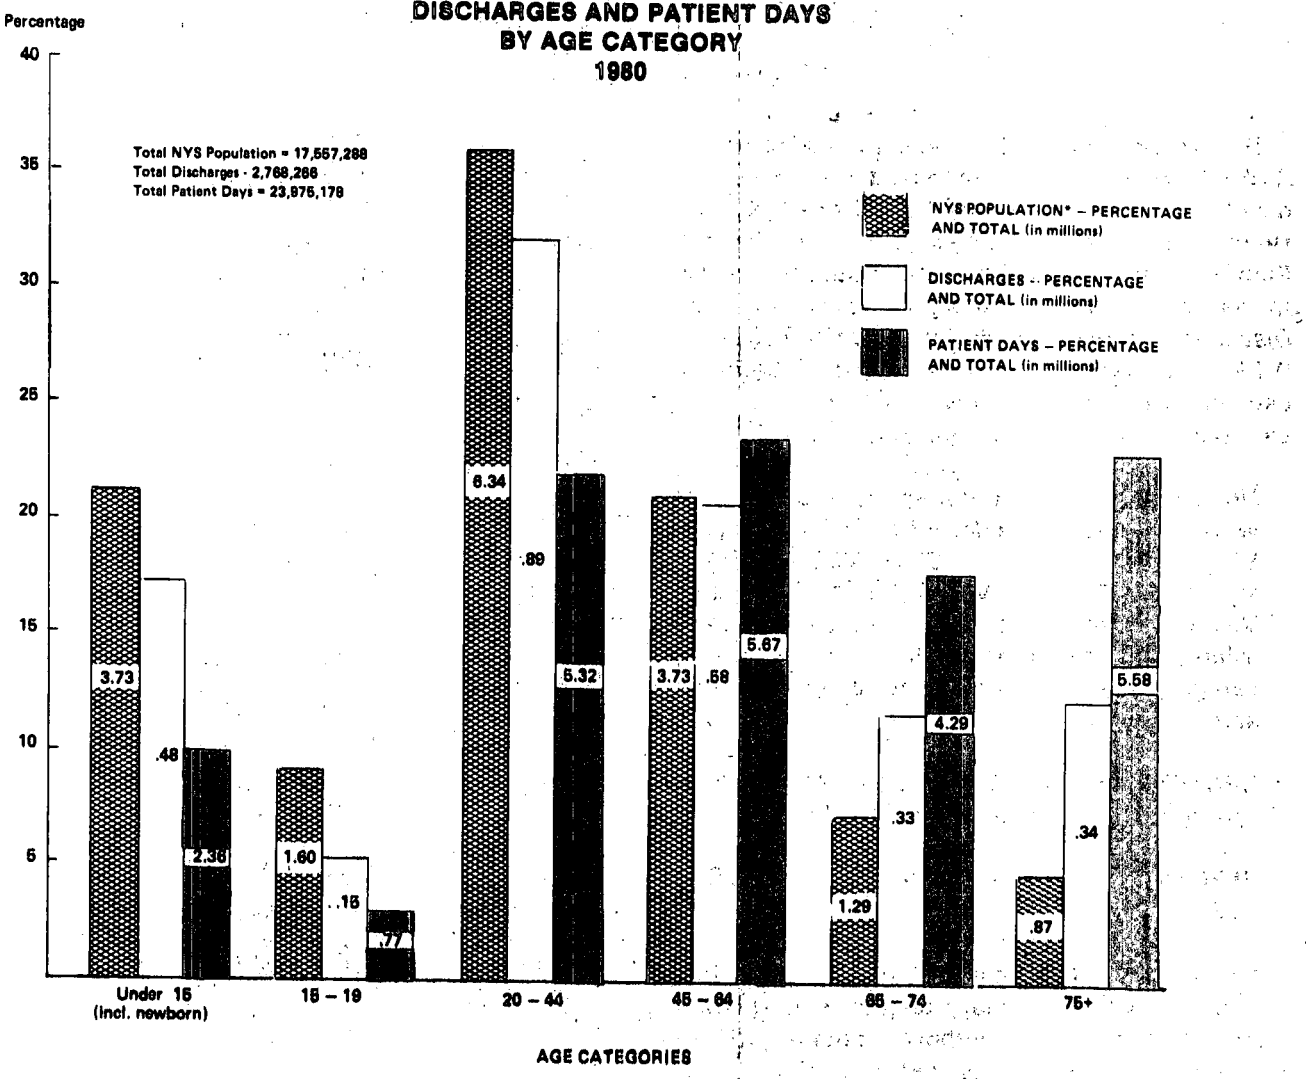
Figure I illustrates the generally known fact that as people get older they are more likely to use hospital services, and that their average length of stay tends to increase as well. The 15 to 19 year old group accounted for slightly more than 9 percent of the state's population while this same group accounted for 5.4 percent of all hospital patients and 3.4 percent of all patient days in 1980.

This figure also shows that persons 75 years of age and older made up about 5 percent of the state's population in 1980, but on the average accounted for more than 20 percent of all patient days for this same year.

[1]The newborn (or nursery) category refers only to live-born infants whose primary (first-listed) ICD-9-CM diagnosis code is V30.0, V30.1, V31.0, V31.1, V32.0, V32.1, V33.0, V33.1, V34.0, V34.1, V35.0, V35.1, V36.0, V36.1, V37.0 and V37.1.

FIGURE I

PERCENTAGE OF NEW YORK STATE POPULATION DISCHARGES AND PATIENT DAYS BY AGE CATEGORY 1980



*Source U.S. Census Bureau

SEX OF PATIENT

In 1980, 1,143,899 males and 1,624,367 females were discharged from general hospitals in New York State. Males represented 41.3 percent of discharges, females 58.7 percent.

Figure J shows the average length of stay and rate of discharge per 1,000 residents for the total state population and for males and females. The population rates are based on the final count of New York residents for 1980 published by the U.S. Census Bureau. While the state population statistics include only residents, SPARCS data include both resident and nonresident patients in New York State hospitals.

The average length of stay for all patients was 8.7 days. For males the average length of stay was 9.2 days, for females its was 8.3 days. If hospital discharges for primary diagnoses involving abortions and obstetrical services are discounted, then the average length of stay for females in 1980 was 9.6 days. The chart also shows that both females and males had approximately the same probability of being hospitalized. The adjusted rate of discharge in 1980 was 138.9 per 1,000 females, compared to 137.2 per 1,000 males.

AVERAGE LENGTH OF STAY
AND HOSPITALIZATION RATE
BY SEX OF PATIENT 1980

	AVERAGE LENGTH OF STAY	HOSPITALIZATION RATE
Both Sexes	8.7 days	157.7 per 1,000 population
Male	9.2 days	137.2 per 1,000 males
Female	8.3 days	176.2 per 1,000 females
Female excluding Abortions and Obstetrical Services	9.6 days	138.9 per 1,000 females

SERVICE CATEGORIES

The service categories used in the SPARCS *Annual Report Series* are based on categories developed by the New York State Department of Health and used by the New York State Health Planning Commission. The categories are defined in terms of the *International Classification of Diseases-9th Revision-Clinical Modification* (ICD-9-CM) diagnosis codes. The SPARCS service categories are tabulated only by primary diagnosis, as reported on the Discharge Data Abstract.

NURSERY - The patient's age is equal to zero with an ICD-9-CM code: V30.0, V30.1, V31.0, V31.1, V32.0, V32.1, V33.0, V33.1, V34.0, V34.1, V35.0, V35.1, V36.0, V36.1, V37.0, and V37.1. These codes refer only to live born infants. The definitions of the nursery service category and the newborn age category are the same.

OBSTETRICAL - All ages, ICD-9-CM codes 630 through 634.9 and 640 through 676.9.

PSYCHIATRIC - All ages, ICD-9-CM codes 290-319.

PEDIATRIC - All patients, age 14 years and younger, whose primary diagnosis is neither included in the newborn, obstetrical or psychiatric categories defined above nor classified by ICD-9-CM codes 614 through 629.9 (gynecological) nor 635 through 639.9 (abortion).

MEDICAL - All patients, age 15 years or older, with no reported procedure code or all reported procedure codes greater than 86.99. This category also includes gynecological patients (ICD-9-CM codes 614 through 629.9) of all ages with no reported procedure code or all reported procedure codes greater than 86.99. Excluded are newborn, obstetrical, psychiatric and pediatric patients as defined above.

SURGICAL - Patients, age 15 years or older, and gynecological patients of all ages reported with at least one procedure code in the range 01 through 86.99 and patients (all ages) whose primary diagnosis is listed as 635 through 639.9 (abortion). Excluded are newborns, obstetrical, psychiatric, pediatric and medical patients as defined above.

For all of the state's HSA regions, the proportion of patient days for medical, surgical and psychiatric hospital services was higher than the proportion of discharges they represented.

For all HSAs except Hudson Valley, Northeastern New York and NY-Penn, the number

of surgical discharges exceeded the number of medical discharges. In all HSAs, the combined number of surgical and medical discharges represented at least two-thirds of all reported discharges. New York City had the lowest proportion of combined surgical and medical discharges (66.6 percent); while these same two categories accounted for 71.4 percent of all discharges in the NY-Penn HSA, the highest proportion of any region in the state. Pediatric, obstetrical and nursery patients accounted for a lower proportion of patient days within each region than their respective proportion of discharges.

The widest variations among HSAs occurred in the psychiatric service category. Statewide, 4.2 percent of all patient discharges from general care hospitals were listed with a primary diagnosis in the psychiatric service category. Psychiatric discharges accounted for 7.3 percent of patient-days spent in general hospitals in the state. In the Hudson Valley HSA, psychiatric discharges represented 4.6 percent of all patients. This is marginally higher than the state average. Psychiatric patients, however, accounted for 10.1 percent of all patient days in this same region. This is the highest regional proportion of psychiatric patient days in the state. The highest proportion of psychiatric discharges (5.6 percent) for any region in the state was in the New York City HSA. Those discharges accounted for 8.9 percent of all patient days occurring in New York City. These findings may be correlated to the availability of psychiatric facilities in a given area rather than to incidence rates in a region.

The lowest proportion of psychiatric discharges occurred in the Central New York (2.3 percent) and Nassau-Suffolk (2.5 percent) HSAs. Those regions also recorded a low proportion of patient days in this service category: 4.1 percent for Central New York and 4.9 percent for Nassau-Suffolk.

EXPECTED PRIMARY SOURCE OF REIMBURSEMENT

The expected primary source of reimbursement used in the *Annual Report Series* was obtained from the Discharge Data Abstract file. The data element is documented at the time of discharge, not the time of payment, and is the best information available to a hospital's medical records department when a patient leaves the facility. Given the complexity of reimbursement methodologies, especially when a patient appears to be eligible under more than one third-party payment plan, the expected primary payor cannot be considered a completely reliable component of this report series. There may be a bias toward underreporting of discharges for programs where there are delays in the establishment of eligibility.

DISCHARGES

Statewide statistics indicate that government-sponsored health care programs and private health insurance played approximately equal roles as the primary payors for hospital patients in 1980. Government sponsored programs were reported as the primary payors for 43.2 percent of all discharges. Private health insurance plans (Blue Cross, commercial insurance and Workers' Compensation) were reported as the primary payors for 47.4 percent of hospital discharges occurring in 1980.

There are wide regional differences with regard to payor distribution. In New York City, government-sponsored programs were the primary payors for over half the hospital patients (50.9 percent), while private insurance was the major payor for 37.6 percent of all cases. These proportions are reversed in the rest of the state, with government programs primarily paying for 37.4 percent of hospital discharges and private insurance reimbursing hospitals for 54.8 percent of discharges.

PATIENT DAYS

Government sponsored programs were the primary payors for hospital stays representing more than half of all patient days in both New York City and the rest of the state. Table 1 in Section III shows that statewide, government programs were the expected primary source of reimbursement for hospital stays, accounting for three-fifths (58.5 percent) of all patient days while private insurance reimbursed hospitals for approximately one-third (34.1 percent) of 1980 patient days. In New York City, government programs were the primary payment source for almost two-thirds (62.8 percent) of patient days in general care hospitals, while private insurance paid for 27.9 percent of patient days. In the rest of the state, government programs paid for 54.6 percent of patient days while private insurance paid for 39.6 percent. Figures L and M show the proportions of discharges and patient days attributable to the four predominant payors - Blue Cross, Medicare, Medicaid and commercial insurance. A detailed listing of expected primary source of reimbursement appears in Section III. Table 1.

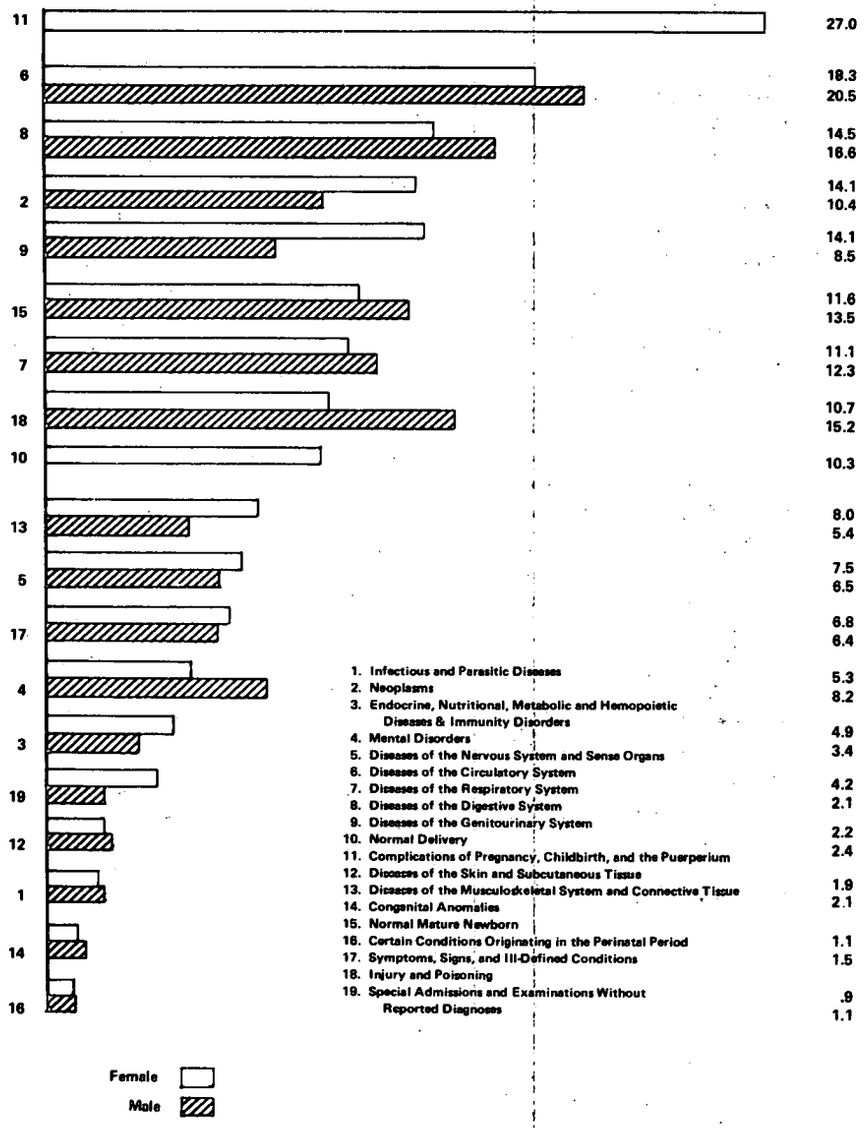
DIAGNOSTIC GROUPINGS

Figure N compares the rate of hospitalization for the male and female populations within 19 summary diagnostic groupings. It does not present "discharges not categorized" (MDC 00). Each diagnostic grouping comprises one or more of the 83 Major Diagnosis Categories listed in Section III, Table 7. The 19 groupings shown are mutually exclusive and include all "categorized" 1980 hospital discharges in New York State. The reader should not confuse the 19 diagnostic groupings used here for purposes of display with the term Diagnosis Related Group. (A breakdown of these 19 groupings is included in Appendix G.)

The most common diagnosis among females was "complications of pregnancy, childbirth and puerperium." This diagnostic grouping includes MDCs 61, 62, and 64.

Of the conditions not related to obstetrical services, "diseases of the circulatory system" were the most frequently occurring conditions requiring hospitalization for both males and females. In 1980, there were 170,975 males and 168,706 females admitted for diagnoses included in this group.

FIGURE N
RATE OF HOSPITAL DISCHARGES PER 1,000 POPULATION BY DIAGNOSTIC GROUP AND SEX



RESIDENT HOSPITALIZATION RATES BY COUNTY

Table 14 in Section III lists each county and its rate of hospitalization per 1,000 residents. The county population figures used in these calculations are based on the published report of the U.S. Census Bureau. The county-of-residence hospitalizaton totals in Table 14 are based on zip code aggregations. County of patient residence is not presently collected on the discharge data abstract, therefore, the data reflected in Table 14 are an approximation using a computerized method of generating county of residence from zip code.

The rates of hospitalization in 1980 for residents of New York City and the rest of the state were similiar. In New York State there were 150.6 resident patient stays for each 1,000 residents. In New York City, the rate of resident hospitalization was 152.2 persons per 1,000, while there were 149.6 resident inpatient stays per 1,000 residents in the rest of the state.

New York State residents treated in out-of-state hospitals are not reported to SPARCS. An assumption can be made that hospitalization rates for counties where patients routinely travel to out-of-state facilities for health care would be higher if data from out-of-state hospitals were included in Table 14.

Residents of Onondaga County were the least likely to be hospitalized in 1980, with a rate of 113.1 hospitalizations per 1,000 residents; the rate for Montgomery County was the highest in the state with 217.2 resident hospitalizations for each 1,000 residents.

Data collected by SPARCS should not, by itself, be used to draw conclusions about the "overall health" of persons residing in a given county. The age distribution of county residents, the availability of primary medical care outside hospitals, the average length of stay for patients hospitalized in a county and socioeconomic characteristics should be taken into account when contrasting the hospitalization rates of different areas of the state.

SUMMARY DIAGNOSTIC GROUPINGS

1. INFECTIOUS AND PARASITIC DISEASES

Major Diagnostic Category

01: Infectious Diseases

2. NEOPLASMS

Major Diagnostic Categories

02: Malignant Neoplasm of the Digestive System
03: Malignant Neoplasm of the Respiratory System
04: Malignant Neoplasm of the Skin
05: Malignant Neoplasm of the Breast
06: Malignant Neoplasm of the Female Reproductive System
07: Malignant Neoplasm of the Male Reproductive System
08: Malignant Neoplasm of the Urinary System
09: Malignant Neoplasm of Other and Unspecified Sites
10: Neoplasm of the Lymphatic and Hemopoietic Tissue
11: Benign Neoplasm of the Female Reproductive System
12: Benign Neoplasm of Other Sites

3. ENDOCRINE, NUTRITIONAL, METABOLIC & HEMOPOIETIC DISEASES & IMMUNITY DISORDERS

Major Diagnostic Categories

13: Diseases of Thyroid and Other Endocrine Glands
14: Diabetes
15: Nutritional and Other Metabolic Diseases
16: Diseases of the Blood and Blood Forming Organs

4. MENTAL DISORDERS

Major Diagnostic Categories

17: Psychoses Not Attributed to Physical Conditions
18: Neuroses
19: Alcoholic Mental Disorder and Addiction
20: Other Mental Disorders

5. DISEASES OF THE NERVOUS SYSTEM AND SENSE ORGANS

Major Diagnostic Categories

21: Diseases of the Central Nervous System
22: Diseases of the Peripheral Nervous System
23: Diseases of the Eye
24: Diseases of the Ear and Mastoid Process

6. DISEASES OF THE CIRCULATORY SYSTEM

Major Diagnostic Categories

25: Hypertensive Heart Diseases
26: Acute Myocardial Infarction
27: Ischemic Heart Diseases Except AMI
28: Arrhythmia and Slowed Conduction
29: Heart Failure
30: Carditis, Valvular and Other Diseases
31: Cerebrovascular Diseases
32: Diseases of the Vascular System
33: Pulmonary Embolism
34: Phlebitis and Thrombophlebitis
35: Hemorrhoids

7. DISEASES OF THE RESPIRATORY SYSTEM

Major Diagnostic Categories

36: Hypertrophy of Tonsil and Adenoid
37: Acute Upper Respiratory Tract Infection and Influenza
38: Other Diseases of the Upper Respiratory Tract
39: Pneumonia
40: Bronchitis
41: Asthma
42: Other Lung and Pleural Diseases

8. DISEASES OF THE DIGESTIVE SYSTEM

Major Diagnostic Categories

43: Diseases of the Oral Cavity, Salivary Glands and Jaw
44: Gastric and Peptic Ulcer

45: Upper Gastro-Intestinal Diseases except Gastric and Peptic Ulcer
46: Appendicitis
47: Hernia of the Abdominal Cavity
48: Enteritis, Diverticula, and Functional Disorder of the Intestine
49: Diseases of the Anus
50: Miscellaneous Diseases of the Intestine and Peritoneum
51: Diseases of the Liver
52: Diseases of the Gallbladder and Bile Duct
53: Diseases of the Pancreas

9. DISEASES OF THE GENITOURINARY SYSTEM

Major Diagnostic Categories

54: Diseases of the Kidney and Ureter
55: Urinary Calculus
56: Cystitis and Other Urinary Diseases
57: Diseases of the Prostate
58: Diseases of the Male Reproductive System
59: Diseases of the Female Reproductive System

10. NORMAL DELIVERY

Major Diagnostic Category

63: Normal Delivery

11. COMPLICATIONS OF PREGNANCY, CHILDBIRTH, AND THE PUERPERIUM

Major Diagnostic Categories

61: Abortion
62: Obstetrical Diseases of the Antepartum and Puerperium
64: Delivery with Complications

12. DISEASES OF THE SKIN AND SUBCUTANEOUS TISSUE

Major Diagnostic Category

65: Diseases of the Skin and Subcutaneous Tissue

13. DISEASES OF THE MUSCULOSKELETAL SYSTEM AND CONNECTIVE TISSUE

Major Diagnostic Categories

60: Diseases of the Breast
66: Arthritis
67: Derangement and Displacement of Intervertebral Disc
68: Diseases of the Bone and Cartilage
69: Other Diseases of the Musculoskeletal System

14. CONGENITAL ANOMALIES

Major Diagnostic Category

70: Congenital Anomalies

15. NORMAL MATURE NEWBORN

Major Diagnostic Category

71: Normal Mature Newborn

16. CERTAIN CONDITIONS ORIGINATING IN THE PERINATAL PERIOD

Major Diagnostic Category

72: Certain Diseases and Conditions Peculiar to Newborn Infants

17. SYMPTOMS, SIGNS, AND ILL-DEFINED CONDITIONS

Major Diagnostic Categories

73: Signs and Symptoms Pertaining to the Nervous, Respiratory, and Circulatory Systems
74: Signs and Symptoms Pertaining to the Gastro-Intestinal and Urinary Systems
75: Miscellaneous Signs, Symptoms, and Ill-Defined Conditions

18. INJURY AND POISONING

Major Diagnostic Categories

76: Fractures
77: Dislocations and Other Musculoskeletal Injuries

78: Internal Injuries of the Cranium, Chest, and Other Organs
79: Open Wounds and Superficial Injuries
80: Burns
81: Complications of Medical and Surgical Care
82: Adverse Effects of Certain Substances

19. SPECIAL ADMISSIONS AND EXAMINATIONS WITHOUT REPORTED DIAGNOSES

Major Diagnostic Category

83: Special Admissions and Examinations without Reported Diagnoses

GLOSSARY

ARS	Annual Report Series
CHIP	Council on Hospital Information Policy
CPHA	Commission on Professional and Hospital Activities
DDA	Discharge Data Abstract
DIS	Disability Services
DOH	New York State Department of Health
DPRB	Data Protection Review Board
DRG	Diagnosis Related Group
DSDP	Data Systems Development Project
FP	Family Planning
HCFA	Health Care Financing Administration
HHS	U.S. Department of Health and Human Services
HIUAC	Health Information Users Advisory Committee
HSA	Health Systems Agency
ICD-9-CM	International Classification of Diseases - 9th Revision - Clinical Modification
ICR	Institutional Cost Report
MDC	Major Diagnostic Category
MMIS	Medicaid Management Information System
NCHS	National Center for Health Statistics
OHSM	Office of Health Systems Management, NYS Department of Health
PAS	Professional Activity Study
PHC	Physically Handicapped Children's Program
PSRO	Professional Standards Review Organization
SFFP	Special Federal Funding Project
SPARCS	Statewide Planning and Research Cooperative System
STAC	SPARCS Technical Advisory Committee
UB-16	Uniform Bill - 16
UBF-1	Uniform Billing Form - 1
UIS	Utilization Information Service

1980
ANNUAL REPORT SERIES STATISTICAL TABLES

The statistical tables in this section are available on a county and hospital specific basis. Individuals who wish to request these tables or initiate requests for new tables should contact the Bureau at the following address or call (518) 473-8144 or 473-1430.

SPARCS Bureau
New York State Department of Health
Rockefeller Empire State Plaza
Tower Building - Room 2276
Albany, New York 12237

TABLE 1
Summary of Hospital Stay Data: New York State, New York City and New York State Excluding New York City

Number of Discharges, Patient Days and Average Length of Stay Data by Age, Sex, Service Category, Expected Primary Source of Reimbursement, Admitting Source, Admission Status, Disposition of Patient, Month of Discharge and Day of Admission

TABLE 2
Hospital Statistical Profile

2A Number of Discharges by Service Category, HSA, County and Hospital
2B Number of Patient Days by Service Category, HSA, County and Hospital
2C Average Length of Stay Data by Service Category, HSA, County and Hospital

TABLE 3

3A Number of Discharges by Service Category, Sex and Age
3B Number of Patient Days by Service Category, Sex and Age
3C Average Length of Stay Data by Service Category, Sex and Age

TABLE 4

4A Number of Discharges by Service Category and Expected Primary Source of Reimbursement
4B Number of Patient Days by Service Category and Expected Primary Source of Reimbursement
4C Average Length of Stay Data by Service Category and Expected Primary Source of Reimbursement

TABLE 5
Number of Discharges, Patient Days and Average Length of Stay Data by Sex and Age

5A Expected Primary Source of Reimbursement - Private
5B Expected Primary Source of Reimbursement - Government
5C Expected Primary Source of Reimbursement - Other and Unreported

TABLE 6
Number of Discharges, Patient Days and
Average Length of Stay Data by County and Hospital

6A Expected Primary Source of Reimbursement - Private
6B Expected Primary Source of Reimbursement - Government
6C Expected Primary Source of Reimbursement - Other and Unreported

TABLE 7
Number of Discharges and Average Length of
Stay Data by Sex and Major Diagnostic Category

7A Age Groupings - 0 to 5; 6 to 14
7B Age Groupings -15 to 19; 20 to 44; 45 to 64
7C Age Groupings - 65 to 74; 75+

TABLE 8
Number of Discharges by Admission Status, Admitting
Source, Patient Disposition and Service Category

TABLE 9
Number of Discharges by Patient Disposition and Age

TABLE 10
Number of Discharges and Average Length
of Stay by HSA, Service Category and Month

TABLE 11
Number of Discharges by the
Fifty Most Common Principal Diagnoses
and Surgical Procedure Categories

TABLE 12
Number of Discharges by Major Diagnostic Category

12A Expected Primary Source of Reimbursement - Private
12B Expected Primary Source of Reimbursement - Government
12C Expected Primary Source of Reimbursement - Other and Unreported

TABLE 13
Number of Discharges by Surgical Procedure Category

13A Expected Primary Source of Reimbursement - Private
13B Expected Primary Source of Reimbursement - Government
13C Expected Primary Source of Reimbursement - Other and Unreported

TABLE 14
Patient Origin Profile

14A Number of Discharges by Service Category, County and Hospital
14B Number of Patient Days by Service Category, County and Hospital
