THE SPARCS DATA SYSTEM

OVERVIEW

▶ BACKGROUND

The Statewide Planning and Research Cooperative System (SPARCS) was implemented by the New York State Department of Health in 1979, with the cooperation and initial financial support of the U.S. Department of Health and Human Services. SPARCS receives, processes, stores, and analyzes inpatient data from all general hospitals in New York State. It is a comprehensive, integrated information network for health care resource planning, financial analysis, and surveillance of hospital services in New York State.

SPARCS has proven to be an effective management tool, not only for the Department of Health, but also for the health care industry. Widespread support and advice from many organizations and individuals in the public and private sectors have made possible the development and refinement of SPARCS. The Department of Health continues to invite active participation in improving the quality and usefulness of SPARCS.

The 1985 Annual Report represents SPARCS's sixth full year of data collection efforts. The Annual Report Series presents hospital stay data for each year through a set of standard statistical tables which serve the needs of a wide spectrum of health information users. Some tables give only statewide totals, but these data are also available in more detail by Health Systems Area, county, and hospital (see the order form at the back of Volume 2).

▶ DATA SOURCES

To minimize the reporting requirements for New York hospitals, SPARCS was designed to make use of two existing data sources: the Discharge Data Abstract (DDA) and the Uniform Billing Form (UBF).

The DDA data set collected by SPARCS (see Appendix A) is based on the Uniform Hospital Discharge Data Set, developed by the National Committee on Vital and Health Statistics. For speed and efficiency, hospitals submit discharge data to SPARCS on computer tapes rather than on paper forms.

The UBF, which is used as the uniform claim form for all third-party payors in New York State, is also a reporting document for SPARCS. (See Appendix B for the UBF data elements collected by SPARCS.) SPARCS data are generally extracted from the UBF after payment has been made to the hospital; thus SPARCS can take advantage of the edits, corrections, and computer tape transfers carried out by the various third-party payors.

▶ DATA PROTECTION

Regulations governing the confidentiality of SPARCS data were adopted by the New York State Hospital Review and Planning Council with the advice of all sectors of the health care industry. The regulatory functions of SPARCS are administered by the Department of Health to ensure stringent control over the confidentiality of SPARCS data.

To protect patient privacy, patient names are omitted from the SPARCS data set for both the DDA and the UBF. As a result SPARCS does not track patients across time. The system tracks the incidence of diseases or conditions requiring hospitalization, rather than individual patients. For this reason users of SPARCS data cannot ascertain the

number of individuals treated for a specific disease, only the number of hospitalizations that have occurred.

The privacy regulations define the major purposes for which SPARCS data may be used: financial studies, rate-setting, facility surveillance, health planning and resource allocation studies, epidemiology, research studies, and each hospital's monitoring of its own data.

A Data Protection Review Board (DPRB) is responsible for approving all requests for deniable data, i.e., data elements which by themselves or in combination with other elements might lead to disclosure of a patient's identity. (See Appendix C for a description of the board's functions and current membership.)

▶ *USES OF SPARCS DATA*

The largest cluster of SPARCS users are hospitals requesting their own data and management consultants acting on behalf of their client hospitals. The second most frequent user of SPARCS data is the New York State Department of Health. Other major users include health-care research organizations, academic research project directors, public interest research groups, and the news media.

All requests for SPARCS data must be submitted to SPARCS. When such requests are approved for production -- including DPRB approval, if needed -- SPARCS provides a cost estimate based on the availability of existing reports and the cost of analysis, programming, and computer time. Before processing begins, the requestor must agree to pay the actual production costs for the report (not to exceed the estimate).

DATA COLLECTION PROCESS

▶ *DISCHARGE DATA ABSTRACT*

Each hospital's medical record department submits its SPARCS DDA data in a uniform, computer-readable format on magnetic tape. These data are sent to SPARCS either directly or through a private information processing service. Each route is producing timely, accurate information for incorporation into the SPARCS database.

Every DDA received by SPARCS is edited to identify errors in critical and noncritical data elements. A critical data element is one that must have a valid value before the record is accepted by the system. When a DDA needs correction, the hospital or processing service is notified. DDAs are also screened carefully for duplicate submissions.

▶ *UNIFORM BILLING FORM*

When a UBF has been completed for an inpatient discharge, the hospital's billing department distributes copies of the form to the appropriate third-party payor or payors. For claims submitted to Medicare, Medicaid, and Blue Cross, the UBF data for SPARCS are collected after the claims have been processed and the data edited by these payors. For all other types of claims the hospital submits a copy of the UBF to its regional SPARCS Data Collection Center at the time the claim is submitted.

The DDA and UBF have a number of common elements that enable matching of records concerning patient stays. Linking these records produces a merged file containing both financial and summary medical abstract information for each inpatient hospitalization.

USE OF THE 1985 SPARCS ANNUAL REPORT

TABLE REVISIONS AND DATA COMPLETENESS

Table 11 is now presented in three parts, showing discharges by the 50 most common principal diagnostic categories (11A), the 50 most common surgical procedure categories (11B), and the 40 most common diagnosis-related groups (DRGs; 11C). Tables 14, 15, and 18 have been expanded to include out-of-state residents.

Before these tables were run, 864 discharges with a reported diagnosis that was incompatible with the reported age were deleted from the 1985 DDA file. The remaining data are complete, except as follows: (1) Cohoes Memorial Hospital closed during 1986, owing approximately 1,000 DDAs from the last eight months of 1985. (2) Tuxedo Memorial Hospital closed during December 1985, owing approximately 300 DDAs from the last three months of 1985. (3) Kingsbrook Jewish Memorial Hospital, because of systems problems, reported approximately 52% of its discharges for 1985, owing about 5,200 DDAs.

CONSTRAINTS ON DATA APPLICATIONS

▶ *INCLUSION BY DATE OF DISCHARGE*

The 1985 report includes data for all patients discharged in 1985, even if they were admitted in 1984 or earlier. Data for patients entering a hospital in 1985 but discharged in 1986 are not included.

▶ *CALCULATION OF LENGTH OF STAY*

SPARCS calculates a length of stay for each discharge record by subtracting the date of admission from the date of discharge. If a patient is admitted and discharged the same day, the length of stay is one day.

MATCHING OF DDA AND UBF RECORDS

In contrast to the DDA data, which are submitted to SPARCS shortly after the patient's hospital discharge, most UBF data are obtained only after payment has been made to the provider. Although this postpayment submission of billing data has many benefits, a long delay may occur between the hospital's submission of bills and SPARCS's receipt of data. Questions concerning a patient's eligibility or coordination of benefits account for some of these delays.

Matching of DDA and UBF records requires special procedures. Regardless of the length of a patient's hospital stay, only one DDA is completed. Billing cycles, however, vary among hospitals. Because many hospitals process bills monthly, submission of a UBF does not always represent a discharge. Moreover, when a patient's claim involves more than one payor, SPARCS must consolidate the records for multiple payors. This is a complex process, which can be fully successful only after all the bills have been received and validated.

These problems have proven difficult to solve, due to the large number of records processed by SPARCS. However, major progress has been made, and matched master files of DDA and UBF data are now available for 1983, 1984, and 1985. The matching rates are 79.4% for 1983, 81.2% for 1984, and 80.5% for 1985.

EXPECTED PRIMARY SOURCE OF REIMBURSEMENT

The expected primary source of reimbursement used in the Annual Report Series is obtained from the DDA. This data element is documented at the time of discharge, not the time of payment, and is the best information available to the hospital's medical records department when a patient leaves the facility. However, given the complexity of reimbursement processes -- especially when a patient appears to be eligible under more than one third-party payment plan -- the expected primary payor is not always the ultimate primary payor. There may also be a bias toward underreporting of discharges for third-party payors when there are delays in establishing eligibility.

Special care should be taken in interpreting tabulations of patient days by expected primary source of reimbursement. For each discharge a single payor is reported as the expected primary source of reimbursement. Since many cases have multiple payors, the expected primary payor may not pay the entire bill.

SERVICE CATEGORIES

The service categories used in the Annual Report Series are based on categories developed by the New York State Department of Health and used by the former New York State Health Planning Commission. The categories are defined in terms of the *International Classification of Diseases, 9th Revision, Clinical Modification* (ICD-9-CM) diagnosis codes. The SPARCS service categories are tabulated only by principal diagnosis, as reported on the DDA.

NURSERY - All patients whose age is equal to zero, with an ICD-9-CM code V30.0, V30.1, V31.0, V31.1, V32.0, V32.1, V33.0, V33.1, V34.0, V34.1, V35.0, V35.1, V36.0, V36.1, V37.0, or V37.1. These codes refer only to live-born infants. The definitions of the nursery service category and the newborn age category are the same.

OBSTETRICAL - All ages, ICD-9-CM codes 630 through 634.9 and 640 through 676.9.

PSYCHIATRIC - All ages, ICD-9-CM codes 290 through 319.

PEDIATRIC - All patients, age 14 years and younger, whose primary diagnosis is neither included in the nursery, obstetrical or psychiatric categories nor classified by ICD-9-CM codes 614 through 629.9 (gynecological) or 635 through 639.9 (abortion).

MEDICAL - All patients, age 15 years or older, with no reported procedure code or with reported procedure codes greater than 86.99. This category also includes gynecological patients (ICD-9-CM codes 614 through 629.9) of all ages with no reported procedure code or with reported procedure codes greater than 86.99. Excluded are newborn, obstetrical, psychiatric, and pediatric patients as defined above.

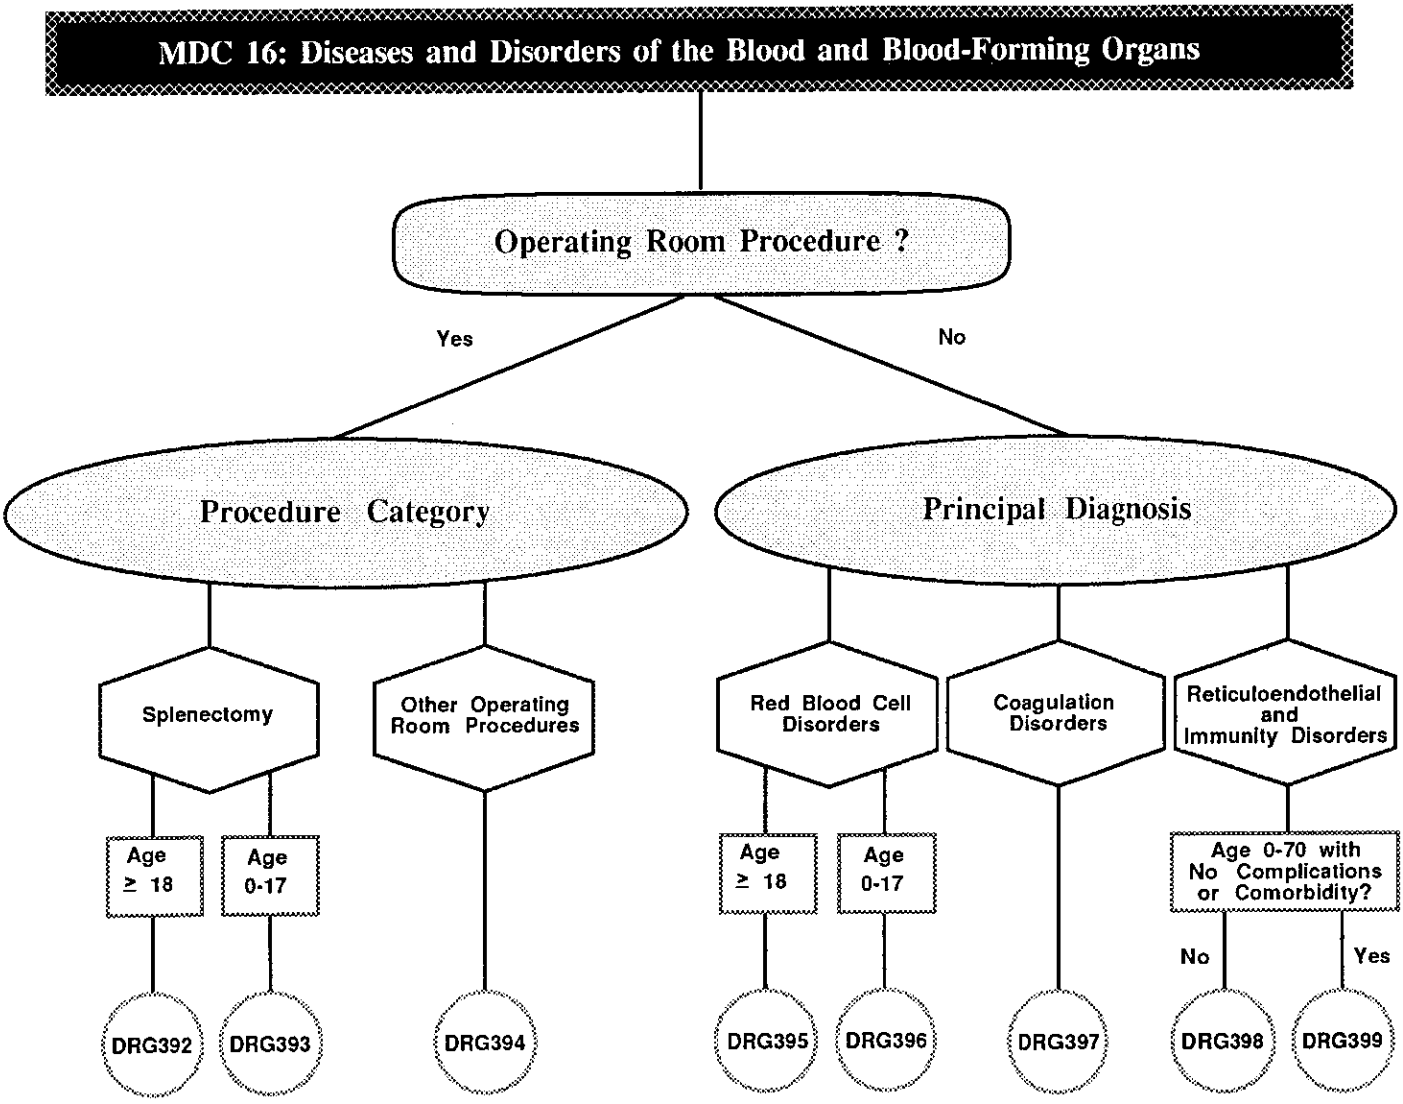
SURGICAL - Patients age 15 years or older with at least one procedure code in the range 01 through 86.99. This category also includes gynecological patients (ICD-9-CM codes 614 through 629.9) of all ages with at least one such procedure code and all patients whose principal diagnoses are codes 635 through 639.9 (abortion). Excluded are newborn, obstetrical, psychiatric, pediatric, and medical patients as defined above.

DIAGNOSIS-RELATED GROUPS

Diagnosis-related groups are a classification system used to categorize patient abstracts into meaningful groupings. In the 1980-1982 Annual Reports the original model of 383 DRGs arrayed within 83 major diagnostic categories (MDCs) was followed. The 1983-1985 reports use the "new" or "federal" DRG model, which consists of 470 DRGs arrayed within 24 MDCs (including a residual category). (See Appendix D for a complete list of MDCs and DRGs.)

The new (470-DRG) model begins the classification by categorizing all principal diagnoses into 23 mutually exclusive and exhaustive MDCs,

Figure A. DRG Classification System



based on predetermined criteria. Within each MDC the criteria used to select the DRG for a record include the principal diagnosis, secondary diagnoses, operating room procedures, substantial comorbidity and/or complication, age, and discharge status. A residual category, MDC 24, comprises cases in DRG 468 (operating procedures unrelated to diagnosis), DRG 469 (valid diagnosis unacceptable as principal diagnosis), and DRG 470 (discharge with invalid data).

Figure A illustrates the method of selecting one of the eight DRGs within MDC 16: Diseases and Disorders of the Blood and Blood-Forming Organs and Immunity.

PATIENT RESIDENCE HOSPITALIZATION RATES

The patient's county of residence used in SPARCS tabulations is the county code submitted to SPARCS on the DDA. New York State residents treated in out-of-state hospitals are not reported to SPARCS. An assumption can be made that hospitalization rates for counties whose patients routinely travel to out-of-state facilities for health care would be higher if data from out-of-state hospitals were available.

Data collected by SPARCS should not be used alone to draw conclusions about the overall health of the residents of areas within the state. The availability of health care outside hospitals, the average length of stay for hospitalized patients, and socioeconomic characteristics should all be taken into account when comparing hospitalization rates across the state.

COMPARISON WITH EARLIER YEARS

SPARCS regulations consider each hospital's reporting to be complete if it reports at least 95% of its discharges. Hospitals statewide now exceed this requirement and report close to 100% of their discharges.

For 1980, however, the first complete year of SPARCS reporting, not all hospitals met this standard. Significant gaps occurred in the reporting by some facilities. The 1980 SPARCS data are therefore not fully representative, and their use in research or statistical analysis is not recommended, even though more than 95% of all 1980 discharges statewide were reported to SPARCS.

Steady improvement occurred in 1981 and 1982, and by 1983 SPARCS approached nearly 100% reporting from all hospitals. Comparison of data from 1983 on will produce reliable trend determinations.

APPENDIX C

DATA PROTECTION REVIEW BOARD

The Data Protection Review Board (DPRB) was established by regulation to review all requests for deniable data. Members are selected to represent various interested groups, as listed below.

For the release of deniable data to be approved, the request must be technically feasible, and a majority of the board must be satisfied that the purpose of the request is legitimate, that the applicant is qualified, that the applicant needs the data to conduct the proposed study, and that adequate safeguards exist to protect patient privacy.

The board makes recommendations to the Commissioner of Health on the release of information. While the Commissioner may reverse the decision of the board, the board can overturn the Commissioner's decision by a two-thirds vote of the entire board. This system of checks and balances protects the rights of individuals while providing access to needed information.
