21B Discharges/Average Length of Stay by Federal DRG, Disposition of Patient for Stays Requiring Alternate Level of Care 360

OVERVIEW

▸ BACKGROUND

The Statewide Planning and Research Cooperative System (SPARCS) was implemented by the New York State Department of Health in 1979, with the cooperation and initial financial support of the U.S. Department of Health and Human Services. SPARCS receives, processes, stores, and analyzes inpatient data from all general hospitals in New York State. It is a comprehensive, integrated information network for health care resource planning, financial analysis, and surveillance of hospital services in New York State. SPARCS has proven to be an effective management tool, not only for the Department of Health, but also for the health care industry. Widespread support and advice from many organizations and individuals in the public and private sectors have made possible the development and refinement of SPARCS. The Department of Health continues to invite active participation in improving the quality and usefulness of SPARCS.

The 1988 Annual Report represents SPARCS's ninth full year of data collection efforts. The Annual Report Series presents hospital stay data based on discharges for each year through a set of standard statistical tables which serve the needs of a wide spectrum of health information users.

▸ DATA SOURCES

To minimize the reporting requirements for New York hospitals, SPARCS was designed to make use of two existing data sources: the Discharge Data Abstract (DDA) and the Uniform Billing Form (UBF).

The DDA data set collected by SPARCS (see Appendix A) is based on the Uniform Hospital Discharge Data Set, developed by the National Committee on Vital and Health Statistics. The UBF, which is used as the uniform claim form for all third-party payors in New York State, is also a reporting document for SPARCS. (See Appendix B for the UBF data elements collected by SPARCS.) Both data sets are submitted to SPARCS electronically.

▸ DATA PROTECTION

Regulations governing the confidentiality of SPARCS data were adopted by the New York State Hospital Review and Planning Council with the advice of all sectors of the health care industry. The regulatory functions of SPARCS are administered by the Department of Health to ensure stringent control over the confidentiality of SPARCS data.

To protect patient privacy, patient names are omitted from the SPARCS data set for both the DDA and the UBF. The focus of the system is the incidence of diseases or conditions requiring hospitalization, rather than individual patients. For this reason users of SPARCS data cannot ascertain the number of individuals treated for a specific disease, only the number of hospitalizations that have occurred.

DATA COLLECTION PROCESS

▸ DISCHARGE DATA ABSTRACT

Each hospital's medical record department submits its SPARCS DDA data in a uniform, computer-readable format. These data are sent to the Department of Health either directly by the hospital or through one of a number of private information processing services.

Every DDA received by SPARCS is edited to identify errors. Each data element must have a valid value before the record is accepted by the system. When a DDA needs correction, the hospital or processing service is notified. DDAs are also screened carefully for duplicate submissions.

▸ *UNIFORM BILLING FORM*

When a UBF has been completed for an inpatient discharge, the hospital's billing department submits data required by SPARCS in a uniform, computer- readable format. Errors are identified, and hospitals are notified of records needing correction.

The DDA and UBF have a number of common elements that enable matching of records concerning patient stays. Linking these records produces a merged file containing both financial and summary medical abstract information for each inpatient hospitalization.

USING THE 1988 SPARCS ANNUAL REPORT

DATA ELEMENTS

▸ *EXPECTED PRIMARY SOURCE OF REIMBURSEMENT*

The expected primary source of reimbursement used in the Annual Report Series is obtained from the DDA. This data element is documented at the time of discharge, not the time of payment, and represents the best information available to the hospital's medical records department when a patient leaves the facility. However, given the complexity of reimbursement processes, especially when a patient appears to be eligible under more than one third-party payment plan, the expected primary payor is not always the ultimate primary payor. There may also be a bias toward under-reporting of discharges for third-party payors when there are delays in establishing eligibility.

Special care should be taken in interpreting tabulations of patient days by expected primary source of reimbursement. For each discharge a single payor is reported as the expected primary source of reimbursement. Since many cases have multiple payors, the expected primary payor may not pay the entire bill.

▸ *SERVICE CATEGORIES*

The service categories used in the Annual Report Series are based on categories developed by the New York State Department of Health and are defined in terms of diagnosis codes from the International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM). The SPARCS service categories are tabulated only by principal diagnosis, as reported on the DDA.

NURSERY - All patients whose age is equal to zero and have an ICD-9-CM code of V30.0, V30.1, V31.0, V31.1, V32.0, V32.1, V33.0, V33.1, V34.0, V34.1, V35.0, V35.1, V36.0, V36.1, V37.0, or V37.1 are considered nursery patients. These codes refer only to live-born infants. The definitions of the nursery service category and the newborn age category are the same.

OBSTETRICAL - Obstetrical patients are females of any age with an ICD-9-CM code within the range of 630 through 634.9 and 640 through 676.9.

PSYCHIATRIC - Psychiatric patients are any age with an ICD-9-CM code within the range of 290 through 319.

PEDIATRIC - Pediatric patients are age 14 years and younger whose primary diagnosis is neither included in the nursery, obstetrical or psychiatric categories nor classified by ICD-9-CM codes 614 through 629.9 (gynecological) or 635 through 639.9 (abortion).

MEDICAL - Medical patients are age 15 years or older with no reported procedure code or with reported procedure codes greater than 86.99. This category also includes gynecological patients (ICD-9-CM codes 614 through 629.9) of all ages with no reported procedure code or with reported procedure codes greater than 86.99. Excluded are newborn, obstetrical, psychiatric, and pediatric patients as defined above.

SURGICAL - Surgical patients are age 15 years or older with at least one procedure code in the range 01 through 86.99. This category also includes gynecological patients (ICD-9-CM codes 614 through 629.9) of all ages with at least one such procedure code and all patients whose principal diagnoses are codes 635 through 639.9 (abortion). Excluded are newborn, obstetrical, psychiatric, pediatric, and medical patients as defined above.

DATA CONFIGURATIONS

▸ *LENGTH OF STAY CALCULATION*

SPARCS calculates a length of stay for each discharge record by subtracting the date of admission from the date of discharge. If a patient is admitted and discharged the same day, the length of stay is one day.

▸ *DIAGNOSIS-RELATED GROUPS*

Diagnosis-related groups (DRGs) are a classification system used to categorize patient discharge abstracts into meaningful groupings. In the 1980 to 1982 Annual Reports the "original" 383 category DRG model was used. The 383 category DRG model was developed before the implementation of ICD-9-CM coding and depends on the conversion of codes to earlier coding schemes. The 1983 to 1988 reports use versions of the "new" DRG model which was designed to use ICD-9-CM codes directly. The first "new" DRG model had 470 DRGs arrayed within 24 Major Diagnostic Categories (MDCs). This version was used for the 1983 to 1985 reports. Because of new technologies, new coding for diseases, and the use of DRGs for reimbursement, adjustments have been made to the grouping methodology in new versions. The 1986 report uses the 471 category revision, the 1987 report uses the 473 category revision, and the 1988 report uses the 475 category revision.

The 475 DRG revision begins the classification by categorizing all principal diagnoses into 23 mutually exclusive and exhaustive MDCs, based on predetermined criteria. Within each MDC the criteria used to select the DRG for a record include the principal diagnosis, secondary diagnosis, operating room procedures, substantial comorbidity and/or complication, age, and discharge status. A residual category, MDC 24, comprises cases in DRG 468 (operating procedures unrelated to diagnosis), DRG 469 (valid diagnosis unacceptable as principal diagnosis), and DRG 470 (discharge with invalid data). In addition, DRG 474 (respiratory system diagnosis with tracheostomy) and DRG 475 (respiratory system diagnosis with ventilator support) are both located under MDC 4.

Figure A illustrates the method of selecting one of the eight DRGs within MDC 16: Diseases and Disorders of the Blood and Blood-Forming Organs and Immunity.

SPARCS DATA REQUESTS

Any questions or requests for SPARCS data can be directed to department personnel by calling the Information Systems and Health Statistics Group-Bureau of Biometrics at (518)474-3189. When specialized requests are approved for production, a cost estimate is provided based on the availability of existing reports and the cost of analysis, programming, and computer time. All the tables included in the Annual Report Series (beginning with 1987) are also available in spreadsheet format. Statewide tables for 1980 through 1988 have been published.
